

Offloading a 40' Container With a Backhoe

Chain and Lift the back end of the container and place (2) pipes under the container as shown below.

Roll the container off the trailer until it is just over half way off. Adjust the pipes as necessary throughout this process.

Lower the back end of the container to the ground assuring the container is resting on a pipe as shown below and not on the trailer.

Chain and lift the front end of the container as shown and drive the trailer away from underneath the container.

Lower the front end of the container to the ground and the job is complete.
